

Near Real-Time Reporting Severe Weather

Be Prepared for Unprecedented

Teren offers a systematic program to help you prepare for what was once considered “force majeure” but is becoming more and more commonplace. Teren’s weather monitoring program delivers automated alerts and spatial data layers of forecasted and observed significant precipitation events in the location of their enrolled assets.

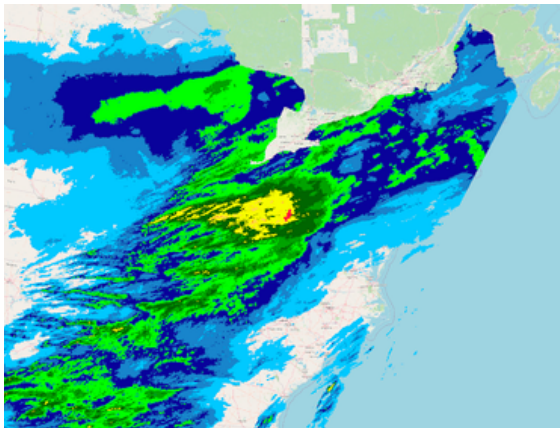

WEATHER MONITORING & ALERTS

Teren provides asset-specific monitoring and forecasting for known and potential threats. We deliver automated notifications within 72 hours of the event so you have time to prepare.

MONITOR WHERE IT MATTERS MOST

Teren detects where and how much precipitation has accumulated relative to your assets with our daily precipitation monitoring. You can choose the criteria to initiate an alert to ensure you meet stakeholder and regulatory requirements.

TAKE TARGETED ACTION

Teren reduced false positives so you only inspect where its truly needed to increase efficiencies and save money. Additionally, with Teren's asset-specific alerts, you can prescribe relevant event response tactics to ensure safety

TEREN ON-DEMAND

With Teren's On-Demand program, you can immediately assess damage, plan your response, and maintain compliance.

Teren can deploy, capture, and deliver LiDAR data and analytics within 72 hours of a significant weather event to meet regulatory requirements and keep your field crews out of harms way.
